NOTICES TO CORRESPONDENTS.

Communications on Editorial matters should be addressed to "The Editor," and those on business to "The Manager," and not to individuals by name.

Correspondents are requested to forward their names and addresses with communications addressed to the Editor, not for publication, but as evidence of good faith.

All letters for publication should be written on one side of the paper only.

Advertisements and Subscriptions which are not ordered for a fixed period will be continued until discontinued.

Orders for extra copies of this Paper should be sent before 11 a.m. on the day of publication. After that hour the supply is limited.

The Daily Press.

HONGKONG, JULY 10th, 1884.

The Franco-Chinese imbroglio has evidently become more complicated than before the Tientsin Convention was signed, and to outward seeming appears farther from settlement.

The reports and rumours current are of a contradictory character, and it is difficult to separate the wheat from the chaff. *Nungnam ad liquidum jam perducitur*, and groping among a host of rumours, we find it well nigh impossible to form any positive opinion as to the chances of war or peace.

It is evident that the French are considerably exasperated by what they consider the treachery of the Chinese at Langson.

If it is true, as alleged by our Shanghai morning contemporary, that definite dates were fixed, by a separate convention, for the evacuation by the Chinese garrisons of certain posts in Tonquin, including Langson; that that town was not evacuated several days after the date fixed; and that the French column despatched to garrrison it was treacherously surprised in a deadly manner by the Chinese force; then the French Government have good cause to be angry.

From the statement made by M. FERRY, in the French Chamber of Deputies on the 7th inst., it is very certain that the French Government consider Chinese perfidy proved and intend to insist upon an indemnity.

The Paris papers name ten millions sterling as the amount that will be demanded. Even this sum, though only half that first mentioned by Reuters, seems to us very large, we may say excessive—at all events when compared with all previous indemnities exacted from China. Perhaps, like the Chinese war preparations, it may turn out that it is not meant, or rather that the amount will be reduced.

The Viceroy of Chihli, whom we believe to be innocent of complicity in the breach of faith involved in the Langson affair, has asked for assistance in the forthcoming negotiations with the French Minister. He evidently feels the gravity of the situation, and doubtless recoils from an undivided responsibility. For this no one can blame the Viceroy, more especially when the numbers and influence of his enemies are considered.

We trust that moderation and mutual conciliation will rule during the negotiations, in order that some agreement may be arrived at, by which war may be averted. Meanwhile on both sides preparations for a conflict are noisily going on.

The Chinese in Shanghai assert that secret decrees of an energetic nature have been issued by the Emperor, ordering the despatch of troops to guard the southern frontier and the adoption of prompt measures of defence wherever needed, and the recent movements of troops here out of statement. But while there is no proof that the mandarins believe that peace is preferable to war, there is nothing to show that the war preparations now going on are anything but precautionary measures in case negotiations fall through. Of course some high official is to blame, just as in the case in the Yunnan outrage when Mr. MAZOUZ was so recklessly murdered—rumour points to the Viceroy of the Yunnan, and the French Government should insist upon the punishment of the party or parties responsible for the attack on Mr. French troops, always provided that it is possible to secure proofs of guilt. Indeed, it is in the interests of the Chinese Government that they should disavow the act, if they can conscientiously do so, and inflict condign punishment on its authors.

The Hongkong Steam Laundry Company, Limited, has held its first annual meeting, and the public have been placed in possession of information as to the state of the works and the intentions of the company as to the mode of conducting business. The laundry, a substantial building situated at Bowring, is rapidly approaching completion, and in two months the Directors hope to commence operations. The Chairman, at the meeting on Monday, said they did not expect to make very large profits, but he hoped the public would accord it their support. This hope, we sincerely trust, will not be disappointed, and that although the profits may not reach remarkable proportions, they will yet be sufficient to return a very fair interest on the capital invested. Few people, we think, will be found to give their washing to the laundries when they have available laundries of their own, and the management, with security against destruction of the clothes and against contamination by unwholesome surroundings or improper use, the laundries usually bring home the things looking clean and bright, but everyone

knows how soon the native mode of washing wears them out, while very unsavoury tales are told of the uses to which they are put between the time they leave their owners' houses and that of their return. We have not heard that the Hongkong laundries use the clothes committed to their care, as the Singapore men are said to do, in connection with ceremonies over the bodies of their friends, but it has always been supposed that the washermen are in the habit of wearing their masters' pyjamas, and that needy persons whose wardrobe is of limited extent can at any time hire a clean shirt or pair of white trousers from the washerman. Perhaps the popular supposition does some injustice to the washerman, but what is quite certain is that the clothes are "got up" in the domiciles of the washermen, where these men eat and sleep, and any one who knows anything of the Chinese way of living will readily see that this must be anything but conducive to the wholesomeness of the clothes. As to the effect of the new company on the laundries, there is no reason to suppose any considerable number of men will be thrown out of work. Many of them will probably find employment at the Bowring establishment, and as it is not to be expected that the whole laundry will at once absorb the whole washing of the Colony, the remainder will continue to find work outside for a time, so that the change will be effected gradually and without bringing distress on those already engaged in the work.

The composite sloop *Daring*, Commander Ching, arrived here yesterday morning from Canton.

The *Yuen-wei*, the new river steamer for the Indo-China Steam Navigation Co., was to go on her trial trip on Shanghai on the 9th inst.

There were no less than twenty-five men-of-war at Chefoo on the 2nd inst. Of these, 13 were Chinese, 5 British, 4 French, and 1 Austrian.

We received the following telegraphic message from the Observatory yesterday evening:— "It is another typhoon signifying east of Manila."

The *N. C. Daily News* says in its issue of the 4th inst.:—"We hear that the shares of the China Merchants' Steam Navigation Co. are over ten per cent. during the last few days."

No. 2 of the *Panama*, the monthly magazine of the Royal Naval Temperance Society, has been published. It contains much readable matter on temperance and general subjects.

Lovers of music are reminded that, weather permitting, the Band of the Rifle will play at the Botanical Gardens this evening, commencing at nine o'clock.

The steamers *Nansing* and *Chitose* have, three days ago, been wrecked on the coast of Japan, and the *Chitose* is now in the port of Yokohama on the 28th June, besides about sixty native junks.

We are requested to state that unless the incoming French mail be on shore by 7.30 this morning it cannot be delivered before 1 p.m. Should it be decided not to deliver the mail, of course the papers will be given all persons requested to refrain from making any application at the Post Office not connected with the outward mail until the hour named.

The members of the Hongkong Sketching Club held their seventeenth exhibition in the City Hall yesterday afternoon. The collection of pictures was unusually large, and there were several fresh exhibitors. It is satisfactory to see public interest so well maintained in these exhibitions, the number of visitors being large during the afternoon.

The *Mercury* says that the U.S.S. *Trenton* left Chemung, Korea, for Nagasaki on the 27th inst., and the British gunboat *Cockade* left the same port for Chefoo on the 28th.

The Italian corvette *Cristoforo Colombo* left Chemung (Korea) on the 28th inst., and arrived at Wampoa on the night of the 3rd inst.

We would direct attention to the Government advertisement, in which notice is given as to the state of the weather at Manila and along the coast. According to a telegram from Hongkong, the centre of the typhoon passed there on the 28th inst. at 5.30 p.m. minimum pressure being 29.50. From observations here it appears to have travelled with a velocity of about 20 miles an hour, and the disturbance appears to have been of an elongated shape and to have extended 500 miles in front of the centre.

The steamer *Thales*, which arrived here yesterday morning, encountered a severe storm in the Gulf of China, and will be seen by her reports. She was off Taiwan-foo at noon on the 28th inst., but owing to the bad weather, and weather threatening, put back and anchored at 6.30 p.m. in the Gulf. During the night she was very heavily squally with rain and hail. At 8 a.m. on the 29th she experienced a typhoon, which lasted until 7 p.m. on the same day. On the morning of the 30th she was again squally with rain, and the weather was very unsettled. The steamer again started for Taiwan-foo and arrived at that port the same afternoon.

In his circular, dated Shanghai 5th July, Mr. Peter Macdonald says:—"A diminishing, though still respectable trade in cotton manufactures continues to be reported, but weakness, unsatisfactory as yet, however, by any means, in prices has been the characteristic of the market throughout the past week, and the situation has not been improved by the revived cry of drought in the north, which is seriously retarding the activity of the market, or by the news of a collision between the French and native forces in the south. Our dealers for the most part, look upon the latter as a purely accidental disturbance, and are not inclined to the fact that Chinese of the extreme south-west may have been ignorant of the recent treaty, and not likely to resist in further trouble. But positively the worst, then, may be further to the south, for fighting is in progress, and the French Government should insist upon the punishment of the party or parties responsible for the attack on Mr. French troops, always provided that it is possible to secure proofs of guilt. Indeed, it is in the interests of the Chinese Government that they should disavow the act, if they can conscientiously do so, and inflict condign punishment on its authors."

The new Chinese dredger, the *Tai Hai*, which has been built at Glasgow to the order of the Chinese Government, arrived at this port on Tuesday night. She is a vessel of about 1,600 tons, and has been constructed for the purpose of dredging out the newly founded naval port in Shanghai. The *Tai Hai* is a powerful dredger, built upon the most modern principles, and is capable of working in the most difficult conditions. It is stated that she proved herself a good sea boat. She is a bucket dredger, the buckets working up and down a long arm, which is raised and lowered by a system of pulleys and ropes. The dredger is being used for the purpose of deepening the harbour, and it is expected that it will be able to remove about 500 tons of earth per hour, and needs no lighters to carry its spoil. The dredger is being used for the purpose of deepening the harbour, and it is expected that it will be able to remove about 500 tons of earth per hour, and needs no lighters to carry its spoil.

EMOTION OF THE STAGE.
Fashions, of course, alter on the stage as elsewhere, for the stage is the mirror of man; but why the actors' gestures should alter every now and then undergo a change it is not so easy to say. To guard, however, against this, the actor's gestures should also change with the times. The gestures which fifty years ago were regarded as the true interpretation of certain feelings are to-day considered absurd and ridiculous. Anger on the French stage used to be expressed by the furious jaw-bashing, the head overcoat and the wig, and adjusting the hair. In our days, however, the angry man's face is around another man's neck, and the sign of good fellowship among men, college friends, and if a young gentleman strutted about with his thumbs in the armpits of his waistcoat, it was held to indicate that he was sure of success in his career. We smile at the thought, and think that it is probable that each fashion are altered; but it is probable enough that the next generation will also smile when hearing of the action which we consider strictly in accordance with the sentiment of a play.—*Pall Mall Gazette.*
